

GRAND AVENUE SOFTWARE

solutions for collaborative intelligence

Customer Profile: superDimension

Business Summary

superDimension, Ltd. is an emerging leader in the minimally-invasive diagnosis and treatment of lung disease (e.g., cancer, emphysema, tuberculosis) via guided bronchoscopy. superDimension transforms traditional bronchoscopy into one that is guided in real time on a 3D roadmap generated from standard pre-operative CT images. This enables successful minimally-invasive navigation throughout the lungs with any standard diagnostic or therapeutic bronchoscopic tool. The results include significantly less trauma for patients, reduced expenses for payers, and increased opportunities for pulmonologists. superDimension's has substantial business operations near Tel Aviv, Israel, in Minneapolis, MN and in Düsseldorf, Germany.

Quality System Goals

- Standardize quality processes across the company.
- Shorten the time required to carry out key quality system processes especially those requiring involvement from multiple company locations.
- Increase compliance at all facilities.
- Provide access to quality records and processes for employees regardless of geographical location.

Solution

- superDimension is leveraging six modules of the Grand Avenue Software suite.

Results

- Integrated three main geographical facilities located on three different continents into one quality system from a process, quality record, and technical system point of view.
- Provided real time access to important quality processes and records from all locations.
- Shortened review, approval and implementation cycle times for quality records from weeks to hours.
- Enhanced process compliance and consistency in important quality system elements.
